

Product Requirements Document (PRD)

Project Name

Student Showcase Platform

Project Overview

Student Showcase Platform is a frontend web application designed to present student projects in a clean, modern, and organized way.

The platform allows visitors to explore projects, search through them, filter by category, and view project details.

The project will be developed by the Mada Studio Frontend Team as part of a real-world software development simulation using GitHub, Jira, Pull Requests, Code Reviews, and Sprint Planning.

Project Goal

The primary goal is to simulate a real frontend development workflow while building a complete web application using:

- HTML5
 - CSS3
 - JavaScript
-

Target Audience

Primary Users

- Students
- Parents
- Visitors

Secondary Users

- Instructors
 - Team Members
-

Pages

Home Page

Contains:

- Navigation Bar
 - Hero Section
 - Statistics Section
 - Featured Projects
 - Call To Action
 - Footer
-

Projects Page

Contains:

- Search Bar
 - Category Filters
 - Projects Grid
 - Pagination (Optional)
-

Project Details Page

Contains:

- Project Title
 - Project Image
 - Description
 - Technologies Used
 - External Links
-

About Page

Contains:

- Platform Overview
 - Mission
 - Team Information
-

Contact Page

Contains:

- Contact Form
 - Social Links
-

Core Features

Feature 1

Project Listing

Users can browse all projects.

Feature 2

Project Search

Users can search by project title.

Feature 3

Category Filtering

Users can filter projects by category.

Feature 4

Responsive Design

Application must work on:

- Desktop
- Tablet
- Mobile

Feature 5

Interactive UI

Basic hover effects and transitions.

Non Functional Requirements

- Clean Code
 - Semantic HTML
 - Responsive Design
 - Reusable Components
 - Accessibility Best Practices
 - Mobile First Approach
-

Development Workflow

The team will follow:

- Sprint Planning
 - Jira Task Management
 - Git Branch Workflow
 - Pull Requests
 - Code Reviews
 - Sprint Reviews
-

Success Criteria

Project is considered successful when:

- All pages are completed.
- Responsive design is implemented.
- All Jira tasks are completed.
- All code changes are reviewed through Pull Requests.
- Final project is deployed successfully.
